FOUNDER STATEMENT

Arthur Pemberton

OWNER/FOUNDER

As the founder of 767.dev, I started this company with a clear purpose: to help organisations increase the speed, reach, and productivity of their business through practical, well-engineered software. Growing up and building a company in a developing economy has made us highly respectful of our clients' time and budgets; so we focus on solutions that waste nothing – automating repeatable tasks, improving how data is used, and delivering digital products that simply do what they are supposed to do, day in and day out. My commitment as founder is simple: to listen carefully, communicate clearly across time zones, and lead a team that is dedicated to economically solving real problems with software-based solutions for clients around the world.

THE COMPANY

767.dev Ltd. is a Dominica-based software development firm serving clients across the Caribbean, the United States, and other international markets. From our base in the Nature Island, we design and deliver bespoke digital solutions that help organisations operate more smoothly, communicate more effectively, and scale with confidence. Our work ranges from building and maintaining online platforms to creating tailored systems that support everyday operations, reporting, and decision-making.

Coming from a small island economy, we understand the importance of making every investment count. That perspective shapes how we work: clear scoping, thoughtful planning, and a strong focus on outcomes rather than unnecessary complexity. Clients value our responsive communication across time zones, our attention to detail, and our ability to translate real-world business needs into dependable software. Guided by a commitment to practical problem-solving and fair, transparent pricing, 767.dev partners with organisations that want reliable, long-term digital support rather than hasty fixes.

MISSION STATEMENT

The Mission

To become the Caribbean-born technology partner of choice for organisations worldwide, recognised for turning real business challenges into clear, dependable software-based solutions. We strive to help our clients go faster and further using modern, and efficient digital services delivered by our technology specialists. By combining thoughtful planning, careful execution, and business-friendly timelines with fair, transparent pricing, we are committed to economically solving meaningful problems for our clients and creating lasting value far beyond the initial project.

SERVICES OFFERED

We specialise in web based and data driven solutions, focusing on the business needs, and delivering enterprise quality products, within budget and on time.

Web Application Development

We listen, we question, we analyse; then we design a web solution, iteratively approaching your perfection; built, deployed, and monitored with enterprise grade tooling.

Website Creation and Maintenance

We take your vision of your online identity, and bring it to life within your branding guidelines; quickly and efficiently using WordPress, where we custom create any bespoke elements.

Data Extraction Transformation and Loading

We help you extract data from various sources: data dumps, web scraping, APIs, and more. We transform it, clean it up, and decorate it. Then we load it into your final format and destination.

Process Automation

We help you increase productivity through automation: repeatable actions that take from your day can be replaced with code.

FEATURED PROJECTS

Developer Team

We provide trained talent: frontend developers, backend developers, and data engineers; for one of the leading advertising agencies in the United States. Our team supports the business' core, proprietary back office and reporting platform – a robust, multi-tiered, and multifaceted application including data processing, business process automation, business intelligence, and client and project management. Other projects and digital products are built and maintained by the team as well.

Business Digitalization

A web application designed and built from the ground up, by development team, and a cadre of college interns. This project aims to fully digitise the records and operations of a local residential care organisation. The system, developed, maintained and improved by our experts was architected for speed, security, and usability – encouraging the administrative staff to actually use their new digital tools to make to improve their productivity. We also provide devops to host the application, and support staff as needed.

Business friendly timelines, at competitive costs, built on open source, with enterprise quality.

GET IN TOUCH

We would love to hear from you. If you have an idea you would like to bring to life, a project that needs expert support, or simply questions about how our software development services can help your organisation grow, don't hesitate to get in touch. Send us an email, and we will respond with tailored insights, clear next steps, and no-obligation guidance. Whether you are just exploring options or ready to start building, our team is here to collaborate with you and turn your vision into a working solution.
